

Vote YES on the MAUI GMO INITIATIVE to Protect Maui County!

What GE chemical companies (Monsanto & Dow Chemical/Mycogen) are doing in Maui County is very different than conventional farming. They are spraying 80 different chemicals, testing them in the open air, upwind from our communities, on Genetically Engineered crops. **That's not farming, that's chemical testing.**

Genetically Engineered crops are banned in dozens of countries, but Maui County is being used as an outdoor laboratory, with little oversight. The citizens of Maui County are asking for **standard impact studies** to be conducted on these crops and chemicals. The chemical companies have spent millions in propaganda, lying to the public about this law, in order to avoid these safety studies.

Maui County Farms: Non-GMO versus GMO

Only 1% of Maui Agriculture is GMO. Our local food and backyard gardens, even HC&S are NOT affected by this initiative.
